**Call us today to schedule
your complimentary equip-
ment audit!**

Triplex Facility Services Sanitary Valve Maintenance Program consists of over 60 factory certified technicians that can service as many as 1,200 valves in a weekend!

Our technicians follow a simple process to ensure you're valves are serviced in a safe and efficient manner.

- We begin with a no charge equipment survey/audit to catalog all pumps and valves in the facility.
- Once on site, techs begin by removing all valves from the line, meticulously documenting valve location and condition.
- We capture each valve state, allowing us to calculate a detailed valve failure rate and opportunities for process improvement.
- Techs then remove all wear components, clean, and sanitize the valve.
- Once cleaning is complete, new seals are installed, the valve is lubricated, returned to service and the process line is tested for any leaks before techs leave.

Triplex Facility Services Sanitary Valve Maintenance Program delivers the manpower you need to service and support of all your mix proof valve needs!
