

## Ball Valves

### PRODUCT HIGHLIGHTS

### WHY SPX FLOW?

Ball valves offer great economy and durability for a wide range of applications that do not require clean-in-place (CIP) service. They are easy to install and maintain. The full ported, straight-through design of ball valves frees the flow path from obstructions. As a result, pressure drops across the valves are reduced, and there is no change in elevation for piping through the valve. This allows efficient and safe production or cleaning processes in the food, beverage, dairy, industrial and chemical industries.

### FEATURES

- Simple three piece design
- All stainless construction and FDA approved materials
- Full port opening
- 2-way and 3-way divert configurations
- Modular actuator and control top options

### BENEFITS

- Easy to maintain
- Compliant with sanitary standards
- Minimal pressure drop across open valve
- Multiple options to meet specific application needs
- Allows automation and safe processing
